## § 400.303

Insurance experience means earned premiums, indemnities paid (but not including replant payments), and other data for the crop (after applicable adjustments), resulting from all of the insured's crop insurance policies insured or reinsured by the Corporation for one or more crop years and will include all information from all counties in which the person was insured.

Loss ratio—means the ratio of indemnity to earned premium expressed as a decimal.

NCS means nonstandard classification system.

NCS base period means the 10 consecutive crop years (as defined in the crop policy) ending 2 crop years prior to the crop year in which the NCS classification becomes effective for all crops, except those specified on the Special Provisions. For these excepted crops, the NCS base period means the 10 consecutive crop years ending 3 crop years prior to the crop year in which the NCS classification becomes effective. For example: An NCS classification effective for the 1996 crop year against a producer of citrus production in Arizona, California, and Texas, or sugarcane would have a NCS base period that includes the 1984 through 1993 crop years. An NCS classification effective for the 1996 crop year against a producer of all other crops would have a NCS base period that includes the 1985 through 1994 crop years.

Person—means an individual, partnership, association, corporation, estate, trust, or other legal entity, and whenever applicable, a State or a political subdivision, or agency of a state.

Substantial beneficial interest—means an interest of 10 percent or more. In determining whether such an interest equals at least 10 percent, all interests which are owned directly or indirectly through such means as ownership of shares in a corporation which owns the interest will be taken into consideration.

## § 400.303 Initial selection criteria.

(a) Nonstandard classification procedures in this subpart initially apply when all of the following insurance experience criteria (including any appli-

cable adjustment in §400.303(d)) for the crop have been met:

- (1) Three (3) or more indemnified losses during the NCS base period;
- (2) Cumulative indemnities in the NCS base period that exceed cumulative premiums during the same period by at least \$500;
- (3) The result of dividing the number of indemnified losses during the NCS base period by the number of years premium is earned for that period equals .30 or greater; and
  - (4) Either of the following apply:
- (i) The natural logarithm of the cumulative earned premium rate multiplied by the square root of the cumulative loss ratio equals 2.00 or greater; or
- (ii) Five (5) or more indemnified losses have occurred during the NCS base period and the cumulative loss ratio equals or exceeds 1.50.
- (b) The minimum standards provided in paragraphs (a) (2), (3), and (4) of this section may be increased in a specific county if that county's overall insurance experience for the crop is substantially different from the insurance experience for which the criteria was determined. The increased standard will apply until the conditions requiring the increase no longer apply. Any change in the standards will be contained in the Special Provisions for the crop
- (c) Selection criteria may be applied on the basis of insurance experience of a person, insured acreage, or the combination of both.
- (1) Insurance experience of a person will include:
- (i) Insurance experience of the person:
- (ii) Insurance experience of other insured entitites in which the person had substantial beneficial interest if the person was actively engaged in farming of the insured crop by virtue of the person's interest in those insured entities;
- (iii) Insurance experience of a spouse and minor children if the person is an individual and the spouse and minor children are considered the same as the individual under § 400.306.
- (2) Insurance experience of insured acreage includes all insurance experience during the base period resulting

from the production of the insured crop on the acreage.

- (3) Where insurance experience is based on a combination of person and insured acreage, the insurance experience will include the experience of the person as defined in paragraph (b) of this section (1) only on the specific insured acreage during the base period.
- (d) Insurance experience for the crop will be adjusted, by county and crop year, to discount the effect of indemnities caused by widespread adverse growing conditions. Adjustments are determined as follows:
- (1) Determine the average yield for the county using the annual county crop yields for the previous 20 crop years, unless such data is not available:
- (2) Determine the normal variability in the average yield for the county, expressed as the standard deviation;
- (3) Subtract the result of § 400.303(d)(2) from § 400.303(d)(1);
- (4) Divide the annual crop yield for the county for each crop year in the NCS base period by the result of §400.303(d)(3), the result of which may not exceed 1.0;
- (5) Subtract the result of \$400.303(d)(4) for each crop year from 1.0;
- (6) Multiply the result of §400.303(d)(5) by the liability for the crop year; and
- (7) Subtract the result of  $\S400.303(d)(6)$  from any indemnity for that crop year.
- (e) FCIC may substitute the crop yields of a comparable crop in determining §400.303(d) (1) and (2), or may adjust the average yield or the measurement of normal variability for the county crop, or any combination thereof, to account for trends or unusual variations in production of the county crop or if the availability of yield and loss data for the county crop is limited. Information about how these determinations are made is available by submitting a request to the FCIC Regional Service Office for the producer's area. Alternate methods of determining the effects of adverse growing conditions on insurance experience

may be implemented by FCIC if allowed in the Special Provisions.

## § 400.304 Nonstandard Classification determinations.

- (a) Nonstandard Classification determinations can affect a change in assigned yields, premium rates, or both from those otherwise prescribed by the insurance actuarial tables.
- (b) Changes of assigned yields based on insurance experience of insured acreage (or of a person on specific insured acreage) will be based on the simple average of available actual yields from the insured acreage during the base period.
- (c) Changes of assigned yields based on insurance experience of a person without regard to any specific insured acreage will be determined by an assigned yield factor calculated by multiplying excess loss cost ratio by loss frequency and subtracting that product from 1.00 where:
- (1) Excess loss cost ratio is total indemnities divided by total liabilities for all years of insurance experience in the base period and the result of which is then reduced by the cumulative earned premium rate, expressed as a decimal, and
- (2) Loss frequency is the number of crop years in which an indemnity was paid divided by the number of crop years in which premiums were earned during the base period.
- (d) Changes of premium rates will be made to reflect premium rates that would have resulted in insurance experience during the base period with a loss ratio of 1.00 but:
- (1) A higher loss ratio than 1.00 may be used for premium rate determinations provided that the higher loss ratio is applied uniformly in a county; and
- (2) If a Nonstandard Classification change has been made to current assigned yields, insurance experience during the base period will be adjusted to reflect the affects of changed assigned yields before changes of premium rates are calculated based on that experience.
